

**Water: no resource is more essential to our health, our food supply, our environment, and our economic well-being.**

Sustainable, low energy treatment approaches and use of renewable energy are all keys to today's approach to providing clean water and managing storm water and wastewater. Cardinal Resources offers a fresh approach to water management through a combination of proprietary technologies and adaptation of existing approaches to meet these key elements. Our depth of experience can help you implement water management solutions to meet your environmental and business goals while leaving the world a better place for the community and the next generation.

Cardinal Resources' approach, processes, services and systems offer new directions to municipalities, industrial clients, and property developers, combining significant cost savings with a lowered environmental footprint. No matter what your needs, whether it is regulatory strategy, watershed management, wetlands evaluation, design, building, and operating treatment systems, or value-added engineering solutions to existing projects, we provide cost-effective, sustainable solutions.

Environmental stewardship and profitability can go hand in hand. Our diverse technologies provide solutions to the complex issues of water scarcity, supply, storage, distribution, quality, preservation, and restoration of our greatest resource: water.

## Services

- Sustainable, Water Supply and Wastewater Approaches
- Solar Powered Water Treatment Technology
- Alternative Energy Wastewater Treatment
- Design/Build/Operate
- Treatability Studies
- Treatment Plant Performance Evaluations
- Plant Start-up & Operations Training
